Orston School Get Their “CitiGrass” Play Area

Orston Primary School in Nottinghamshire has recently had a new outdoor play area installed by AstroSport Limited. Working closely with the teachers, Parent Governor’s and pupils, AstroSport were asked to design and install an outdoor area, which could be used for play, sport and other educational and recreational activities. Having studied the range of options offered by other suppliers, the school decided that CitiGrass was the best solution for the pupils as it provided a perfect surface for their needs as well as offering exceptional value for money.

Carl Whelan who developed the CitiGrass play area said “We are very pleased to have had the opportunity to build this new facility. More schools should have similar facilities as it would greatly increase the number of outdoor activities for the pupils and on a surface which is available all year round. Our company offer several types of artificial grass surface depending on usage and budget. CitiGrass brings back the fun and assists with educational development and more importantly safety. With this project the client wanted to utilise a grassed area which is unusable for several months of the year. The new surface can be used as an outdoor classroom during the summer months as well as for sport and play. We installed our CitiGrass Synthetic Grass System to create a natural lawn environment so that the pupils could play and learn outside in all weathers which, if required can also replace the schools main playground.

The school are delighted with the new facility and the service provided by AstroSport Limited and are looking forward to

using the area for all sorts of varied activities. David Dury a School Governor and responsible for over seeing the works said "AstroSport Limited has carried out a fantastic and professional job. The completed area looks great and has transformed this part of the school playing field. We would not hesitate to recommend or use them again for other projects."

CitiGrass by AstroSport is specifically designed for residential lawns, urban and commercial landscape design, leisure activities and school play grounds. It delivers a revolutionary and wide range of products that are ideal for all your landscaping needs, offering an unmatched combination of beauty, durability, and value!

The CitiGrass system chosen for Orston School is manufactured using extremely tough but very soft monofilament fibres that are 60mm long. The surface is then filled with a combination of rounded sand and fine rubber particles to provide a resilient and safe system for the pupils to enjoy.

CitiGrass is available in sizes and pile lengths to suit all types of installation and is installed without any major ground preparation works. We offer a complete supply and installation service carried out by our own directly employed and highly trained staff. We also offer a free site inspection followed up with a quotation based on your requirements.

In addition to CitiGrass, AstroSport Ltd offer a range of synthetic surfaces for sport, play and education.

Synthetic Sports Surfaces

News . . .

AstroSport Limited is a company that exists to provide specialist supply and installation of synthetic sports surfacing. A company with over 25 years knowledge and experience within the sports industry offering our services to sports facility building contractors and end user.

Astrosport Limited offer a complete range of synthetic sports surfaces including artificial grass and polymeric rubber for sport and leisure including Football, Tennis, Multi Use Games Areas, Cricket, Golf, Hockey and Athletics.

We can offer no obligation design, specification and budgetary assistance for most types of new or refurbishment project. At the early stages of a project it is very important that these areas are investigated properly with advice, design or, or simply to build a facility based on your designs. We can tailor our services to suit your requirements.

Our company is run by a small team of dedicated staff who have all been directly employed in this industry for many years. The combined skills of installation and commercial experience enables us to provide the level of service that is required to complete all of our projects efficiently whilst offering the best advice available.

All work is carried out by our directly employed skilled work force, who have been properly trained in all aspects of sports facility installation and health and safety. All employees hold the relevant certificates for using all plant and machinery in private and public work places.

AstroSport Limited: offer the following services:

- Working in partnership with other contractors we install a full range of all types of synthetic sports surfaces.
- Working directly for clients to provide a one stop supply and install package including ancillary works.
- Facility refurbishment is our area of expertise. We offer a complete turnkey package for all types of refurbishment works. This includes removal and disposal of the old surface, rectification and preparation of underlying base, supply and installation of new synthetic shock absorbent layers and new synthetic surface. Existing synthetic grass pitches and Multi Use Games Areas (MUGA's) can often be resurfaced and upgraded without the need for complete replacement of the shock-pads or sub-base layers.
- All worn and old surfaces and shock absorbent layers that we remove are re-cycled or re used. Nothing is disposed of to landfill sites. We offer this facility on all refurbishment projects. This results in a positive effect on the environment and reduces the cost of the project.
- We offer a comprehensive maintenance and repair service on all our completed facilities. Maintenance services are offered as part of our ongoing after sales services and repairs can be carried out at short notice.
- Periodic line marking with high quality durable paint, installation of permanent inlaid lines, sports equipment supply and installation, surround fence repairs and maintenance, floodlight maintenance, irrigation service and maintenance.
